# GE Digital Energy

## Power Quality & Energy Cost Management

The Multilin PQMII provides accurate and reliable three-phase power metering with an optional Ethernet and fiber communications module in a compact horizontal form factor. The PQM II is ideally suited for metering of distribution feeders, transformers, generators, and motors.

The PQMII provides continuous metering for current, voltage, real and reactive power, energy use, cost of power, power factor and frequency. Waveform capture and voltage disturbance recorder continuously monitors power quality. With programmable setpoints and 4 assignable output relays, control functions and capabilities can be added for specific applications.

### Key Benefits

- Power quality metering with waveform capture and historical data logging for detailed energy and disturbance analysis
- Easy to program and use with keypad and large illuminated, 40 character display
- Multiple communication ports for simplified integration with DCS and SCADA systems
- Added network flexibility with support for DNP3.0 and Modbus communications protocols
- Digital and analog I/Os for control and alarm functions
- Voltage disturbance recording capability for analysis of electrical sag and swell events, enabling stable, clean power
- Flexible control for demand load shedding, and power factor

### Applications

- Metering of distribution feeders, transformers, generators, capacitor banks, and motors
- Suitable for Medium and Low Voltage systems
- Commercial, Industrial, or Utility applications

## Monitoring & Metering

- Current and Voltage measurements (Ia Ib Ic In, Va Vb Vc Vab Vbc Vca
- V I unbalance
- True PF Crest and K factor
- Hz, W, VAR, VA
- Wh, VARh, Vah, W cost
- Demand: W VAR VA
- Power Factor

## Power Quality

- Harmonic analysis through 63rd with THD and TIF
- Total harmonic distortion
- Disturbance recording and waveform capture

## Data Logging

- Event Recorder up to 150 events
- Waveform capture
- Data Logger up to 98,000 events
- Voltage Disturbance Recorder (VDR) up to 500 events

### Communications

- Front RS232 serial port
- Two rear RS485 serial ports with Modbus and DNP 3.0 protocol
- Ethernet connectivity via MultiNet
- External dial-in modem capabilities

## Control

- Load shedding
- Power factor control
- Pulse input totalizing

#### Introduction

GE Multilin has set a new standard in metering technology with the introduction of the PQM II. This meter, designed on the latest industry specifications, provides accurate and reliable three-phase power metering with an optional Ethernet and fiber communications module in a small and modern package. The PQM II can be used for a variety of applications including metering of distribution feeders, transformers, generators and motors.

#### Robust Metering and Power Quality Capabilities in One Package

The PQM II is an ideal choice when continuous monitoring of a three phase system is required. It provides metering for current, voltage, real and reactive power, energy use, cost of power, power factor and frequency. Waveform capture and Voltage Disturbance Recorder continuously monitors power quality. Programmable setpoints and 4 assignable output relays allow control functions to be added for specific applications.

#### **Communications Made Easy**

Integrate process, instrumentation and electrical requirements in a plant automation system by connecting PQM II meters to a DCS or SCADA system. Meter provides multiple communication ports that can provide data simultaneously to multiple masters such as SCADA, DCS, BMS etc. Meter supports both ModBus and DNP 3.0 protocol. A computer running EnerVista<sup>m</sup> software can change system setpoints, monitor values, status and alarms. Continuous monitoring minimizes process downtime by immediately identifying potential problems due to faults or changes.

## Industry leading software makes setup simple

The PQM II comes complete with EnerVista<sup>™</sup> GE Multilin's suite of software tools for managing the entire lifecycle implementation of the PQM II. EnerVista<sup>™</sup> contains all of the tools for setting up and configuring your PQM II in minutes via RS232, RS485, external modem or Ethernet LAN.

#### Ethernet capability

With the optional Multinet module, users can add Ethernet capability to their meter. Multinet is an Ethernet communications module that allows connection of up to 30 ModBus devices, providing ModBus TCP/IP communications for these devices over Ethernet. This allows connection to Fiber Optic LAN and WAN systems for remote access to data on the PQM II.

### **Standard Features**

The PQM II provides continuous monitoring of a three-phase system. It provides metering of current, voltage, real and reactive power, energy use, cost of power, power factor and frequency. Ethernet communications are available through the optional Multinet module.

#### Metering

PQM II is a true RMS meter with 0.2% accuracy for voltage and currents. The PQM II provides advanced features for monitoring and metering which include:

- Ia, Ib, Ic, In
- Va, Vb, Vc, Vab, Vbc, Vca
- Unbalance: V and I
- True PF, crest and K factor
- Hz, W, VAR, VA
- Wh, VARh, VAh, W cost
- Demand: A, W, VAR, VA

Keypad and illuminated 40 character display provides local setpoint settings and monitoring of values and status.

#### **Mounting Versatility**

PQM II panel mount with display, offers an easy local interface. Standard models have RS485 communications for programming and monitoring. Users can replace expensive additional devices by-adding the CONTROL, TRANSDUCER and POWER analysis options to the PQM II as required.

#### Alarms

Any of the assignable outputs may be used to trigger an alarm for specific applications. Simple alarm messages provide easy notification.

Connect up to 32 ModBus devices to your Ethernet network

#### Communications

Integrate process, instrumentation and electrical requirements in a plant automation system by connecting PQM II meters to a DCS or SCADA system. Initially PQM II meters can be used as stand-alone units. Open architecture allows connection to other ModBus® compatible devices on the same communication link. At a later stage PQM II can be integrated in a complete plant wide system for overall process monitoring and control.

The standard PQM II comes complete with a rear RS485 and front RS232 port. RS232 port can be used for data collection, printing reports or problem analysis without disturbing the main RS485 communication interface at rear. The standard meter provides:

- RS485 ModBus® 1,200 to 19,200-bps
- DNP 3.0 Level 2 Protocol
- Mini RTU SCADA system component
- Measure actual values
- Read status
- Issue control commands
- Load all setpoints from a file
- Change individual setpoints

A computer running EnerVista™ software can change system setpoints, monitor values, status and alarms. Continuous monitoring minimizes process downtime by immediately identifying potential problems due to faults or changes.

Connect two 4 to 20 mA transducers for process variable measurement and control.

#### **Future Expansion**

The PQM II uses non-volatile flash memory for firmware storage. This allows future product upgrades to be loaded via the serial port. Upgrades can also be downloaded from the GE Multilin website.

#### Options

There are a variety of options available to the user, allowing a range of custom configurations:

#### Transducer

Four Analog Outputs: Four isolated analog outputs can be used to replace eight analog transducers. Output signals can be selected from any of the measured parameters for direct interface to a PLC or other devices.

Analog Input: PQM II meter can accept two analog inputs from external devices. Meter can be programmed to activate a control relay based on analog input from transducers (temperature, level etc.)

#### Communications

Second Rear Comm Port: An additional rear RS485 comm port is provided for simultaneous monitoring by process, instrument, electrical or maintenance personnel.

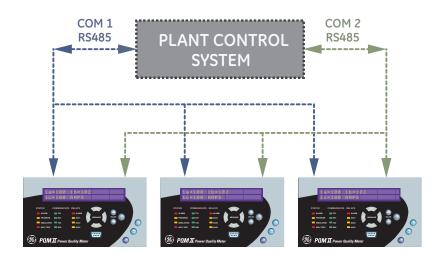

#### Control

Three output relays and four inputs allow measured parameters from the standard PQM II to be combined with setpoints and I/ Os for control applications. With the control option, three output relays and four switch inputs are added along with programmable setpoints to make a mini RTU. Output relays can also be controlled via the communication port or assigned to different setpoints for custom programming to accommodate many applications such as:

- Undercurrent alarm for pumps
- Over and undervoltage for generators
- Unbalance alarm for rotating machines
- Dual level power factor for capacitor bank switching
- Underfrequency/demand output for load shedding resulting in power cost savings
- kWh, kvarh and kVAh pulse output for PLC interface

#### **Power Analysis**

Data Logger (Trending): Trending is useful as a troubleshooting aid when a problem is detected. Measured values can be selected and plotted with a programmable sampling rate to suit the time interval of interest. The generated chart recorder screen can be printed or exported to other programs for report writing.

Redundancy in high security systems is provided by the 2nd RS485 comm port.

Harmonic Analysis: Non linear loads such as variable speed drives, computers and electronic ballasts can cause harmonics which may lead to problems such as nuisance breaker tripping, telephone interference, transformer, capacitor or motor overheating. Harmonic analysis can be used for fault diagnosis such as detecting undersized neutral wiring, need for a harmonic rated transformer, or effectiveness of harmonic filters. Details of the harmonic spectrum are useful and available with the power analysis option.

#### Voltage Disturbance Recorder (VDR)

The Voltage Disturbance Recorder (VDR) function adds to the PQM II the ability to monitor and record Sag and Swell disturbances. It can record up to 500 sag/swell events for all voltages simultaneously. Waveform Capture: Voltage and current waveforms can be captured and displayed on a PC using the EnerVista™ program supplied with the PQM II or using third party software. Distorted peaks or notches from SCR switching provide clues for taking corrective action.

**Event Recorder:** Alarms, setpoint triggers, input and output events can be stored in a 150 event record and time and date stamped by the internal clock. This is useful for diagnosing problems and system activity. Minimum and maximum values are also continuously updated and time stamped.

**Trace Memory:** The PQM II can be configured to record a maximum of 36 cycles of data on all voltage and current inputs based on overvoltage, undervoltage, overcurrent or switch input state change.

### EnerVista™ Software

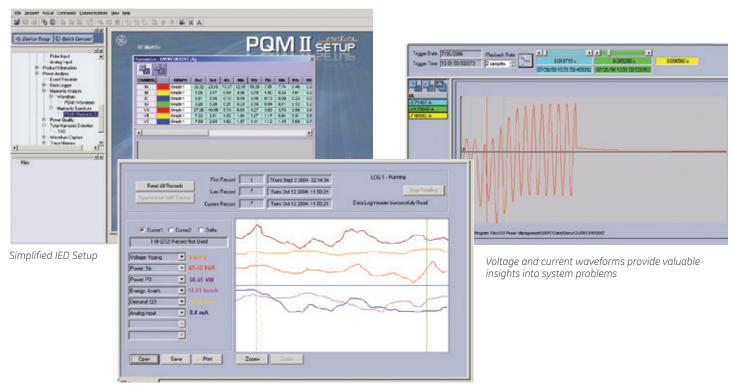

#### EnerVista<sup>™</sup> Launchpad

EnerVista<sup>™</sup> Launchpad is a powerful software package that provides users with all of the setup and support tools needed for configuring and maintaining GE Multilin Products. Launchpad allows configuration of devices in real-time by communicating using RS232, RS485, Ethernet, or modem connections.

The intuitive user interface makes it simple to enter setpoints, read metered values, monitor status and evaluate power quality. Powerful troubleshooting features make it easy to retrieve and view voltage & current waveshapes and harmonic analysis. This vital information can help provide early warning of problems and prevent equipment damage or nuisance breaker tripping. Included in Launchpad is a document archiving and management system that ensures critical documentation is up-to-date

### EnerVista Launchpad PQM II Setup and Analysis

PQM II setup program contains many tools and reports that simplify device configuration and allows viewing of power system events.

Record trends of measured parameters over time

and available when needed by automatically checking for and downloading new versions of manuals, applications notes, specifications, and service bulletins.

#### **Viewpoint Monitoring**

Viewpoint Monitoring is a simple-to-use, full-featured monitoring and data recording software package for small systems. Viewpoint Monitoring provides a complete HMI package that instantly puts critical real-time device data on your PC through pre-configured graphical screens with the following functionality

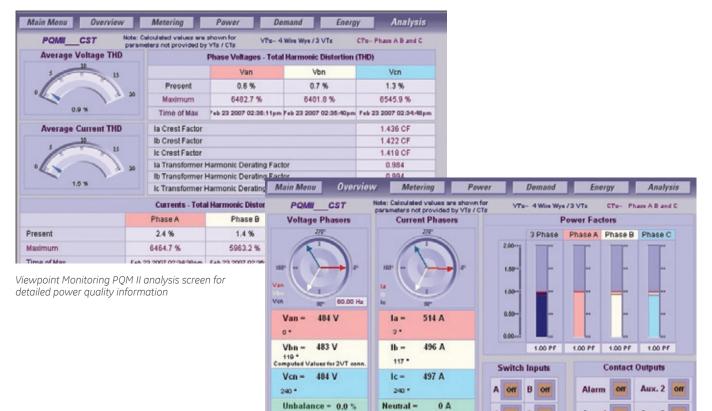

- Plug-&-Play Device Monitoring
- System Single-Line Monitoring & Control
- Annunciator Alarm Screens
- Trending Reports
- Automatic Event Retrieval
- Automatic Waveform Retrieval

#### EnerVista<sup>™</sup> Integrator

EnerVista™ Integrator is a toolkit that allows seamless integration of GE Multilin devices into new or existing automation systems by sending GE device data to HMI, DCS, and SCADA systems. Included in EnerVista Integrator is:

- OPC/DDE Server
- GE Multilin Drivers
- Automatic Event Retrieval
- Automatic Waveform Retrieval

Please refer to the Multilin PQMII Power Quality Meter Instruction Manual for complete technical specifications

### **PQM II Dimensions**

### Ordering

PQM II	*	**De	scription
PQM II			Basic unit with display, all current/voltage/power measurements, 1-RS485 comm port, 1 RS232 comm port
	т20		Transducer option; 4 isolated analog outputs 0 – 20 mA and 4 – 20 mA, assignable to all measured parameters, 4 – 20 mA analog input, 2nd RS485 comm port
	T1		Transducer option; 4 isolated analog outputs 0 – 1 mA, assignable to all measured parameters, 4 – 20 mA analog input, 2nd RS485 comm port
		С	Control option; 3 additional programmable output relays (total of 4), 4-programmable switch inputs
			A Power analysis option; harmonic analysis, triggered trace memory waveform capture, event record, data logger, voltage disturbance recorder (VDR)

MOD 501: MOD 504: MOD 525: Control Power: 90 - 300 VDC/70 - 26

90 – 300 VDC/70 – 265 VAC standard 20 – 60 VDC/20 – 48 VAC (MOD 501)
