

# Resistance Temperature Detectors Probes & Assemblies

## PRODUCT FEATURES

- ☛ Rugged Construction
- ☛ Accurate and Stable Probes
- ☛ General Purpose, Tip Sensitive, High Temperature and High Vibration Probes and Assemblies
- ☛ 2, 3 and 4 Wire Configurations
- ☛ General Purpose or Spring Loaded Mounting, with or without Thermowells
- ☛ Nipple, Nipple-Union-Nipple or Bushing Extension Hardware
- ☛ CSA Approved Assemblies for Hazardous Locations
- ☛ Averaging RTDs
- ☛ Custom Configurations
- ☛ Head Mounted Transmitter Options

## GENERAL

Resistance Temperature Detectors (RTDs) are used for industrial temperature measurements where high accuracy and long-term stability are required. The 100 ohm platinum element is the most common for industrial applications. The 3-wire lead configuration is used for industrial temperature measurements and provides adequate compensation for leadwire resistance. The 4-wire arrangement fully eliminates all leadwire effects and is used in applications where high accuracy is required.

## TOLERANCE & ACCURACY

**Tolerance** of an RTD is a measure of its conformity to the ITS-90 Temperature-Resistance curve, and is normally expressed as an allowable deviation from the normal resistance at 0 °C. It consists of a manufacturing tolerance on the reference point (eg: how close is the resistance to 100 Ω at 0 °C) and a materials tolerance on the Temperature Coefficient of Resistance (eg: how close does the wire conform to an alpha of .00385).

At the reference temperature, only the manufacturing tolerance applies (since this is where the RTD element is “adjusted” to 100 Ω). At other temperatures, the materials tolerance must be added. As the temperature increases or decreases, the tolerance becomes wider. At higher temperatures, the material tolerance has the larger influence.

**DIN/IEC 60751 (replaces DIN 43760) defines Class B and Class A tolerances.**

Temp °C	Resistance Ω	Class B		Class A	
		Ω	°C	Ω	°C
-200	18.52	±0.56	±1.3	±0.24	±0.55
-100	60.26	±0.32	±0.8	±0.14	±0.35
0	100.00	±0.12	±0.3	±0.06	±0.15
100	138.51	±0.30	±0.8	±0.13	±0.35
200	176.86	±0.48	±1.3	±0.20	±0.55
300	212.05	±0.64	±1.8	±0.27	±0.75
400	247.09	±0.79	±2.3	±0.33	±0.95
500	280.98	±0.93	±2.8	±0.38	±1.15
600	313.71	±1.06	±3.3	±0.43	±1.35
650	329.64	±1.13	±3.6	±0.46	±1.45
700	345.28	±1.17	±3.8	--	--
800	375.70	±1.28	±4.3	--	--
850	390.48	±1.34	±4.6	--	--

**Class B:**  $\pm (0.30 + .005 \times |t|)$  °C

**Class A:**  $\pm (0.15 + .002 \times |t|)$  °C

|t| = absolute value of temperature in °C

NOTE: Tolerances apply to the element, not to final probe.

Elements with narrower tolerances are available (eg: 1/3 B, 1/5 B, etc). No standard exists for these fractional tolerance elements; it depends on the manufacturer of the element. For example, a 1/10 B element would normally have a manufacturing tolerance of 0.03 °C, but the material tolerance would depend on the manufacturer’s choice of wire (class B, class A or other).

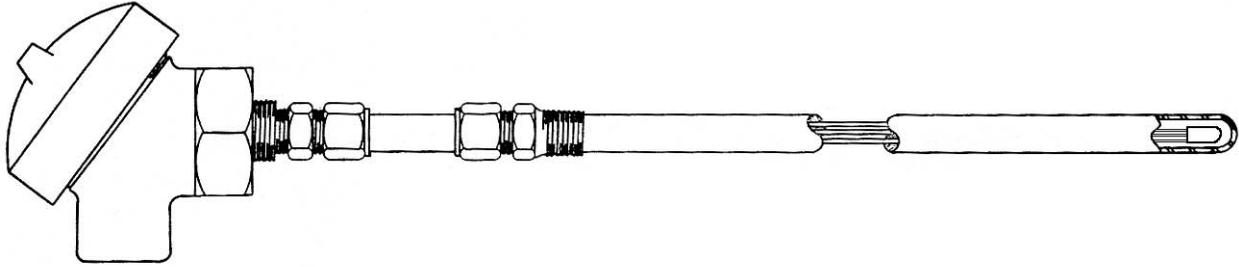

**Accuracy** is dependent on the tolerance of the RTD, the measurement temperature, the accuracy of the readout device, the effects of the interconnecting leadwire and the installation.

For highest accuracy use a calibrated Class B element with a precision transmitter (or meter) that can be characterized to match the RTD calibration.

Platinum elements with other temperature-resistance curves are available (eg: JIS). Copper and Nickel elements are also available as replacements to match existing instrumentation.

**SPECIFICATIONS**

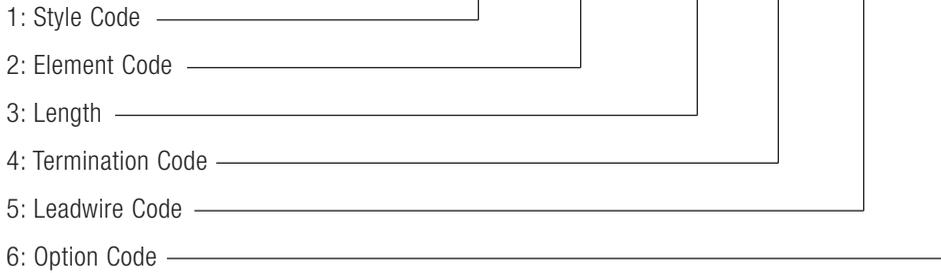

ELEMENT MATERIAL:	Platinum, DIN/IEC 60751
ELEMENT RESISTANCE:	10, 100, 500, 1000 $\Omega$
TOLERANCE:	$\pm 0.12\%$ of resistance at 0 $^{\circ}\text{C}$ (Class B) $\pm 0.06\%$ of resistance at 0 $^{\circ}\text{C}$ (Class A)
STABILITY:	0.05% of resistance/year at 0 $^{\circ}\text{C}$
TEMPERATURE COEFFICIENT:	.00385 $\Omega/\Omega/^{\circ}\text{C}$
TEMPERATURE RANGE:	-50 $^{\circ}\text{C}$ to 250 $^{\circ}\text{C}$ (R1,R2) -200 $^{\circ}\text{C}$ to 500 $^{\circ}\text{C}$ (R3,R5) -200 $^{\circ}\text{C}$ to 550 $^{\circ}\text{C}$ (R4)
LEAD CONFIGURATION:	2, 3 or 4 wire
LEAD MATERIAL:	Stranded copper for 260 $^{\circ}\text{C}$ Stranded ni-clad copper for 500 $^{\circ}\text{C}$ Solid nickel for 550 $^{\circ}\text{C}$
LEAD INSULATION:	Teflon for 260 $^{\circ}\text{C}$ probes Fiberglass for 500 $^{\circ}\text{C}$ probes MgO for 550 $^{\circ}\text{C}$ probes
PROBE MATERIAL:	316 stainless steel
PROBE TIP:	Stainless steel Copper alloy for tip sensitive probe
PROBE SIZE:	0.25" OD
VIBRATION:	20g over 10 to 1K Hz
RESPONSE TIME:	30 sec nominal for SS tip 15 sec nominal for copper tip
SELF HEATING:	20 mW/ $^{\circ}\text{C}$ for SS tip 40 mW/ $^{\circ}\text{C}$ for copper tip
PRESSURE RATING:	500 psig over temperature range
INSULATION RESISTANCE:	1000 M $\Omega$ at 500 VDC

**ORDERING INFORMATION**

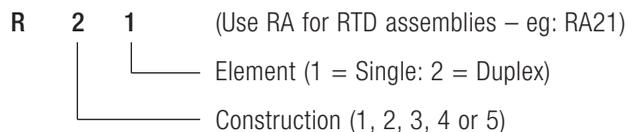

A 6-part catalog number is used to specify a complete RTD probe.

**R21 - D100A3 - 012.0 - 68 - A024 - 03**

**Example:** The above catalog number identifies a general purpose RTD probe with a .250" OD stainless steel sheath 12" long, a 100 ohm platinum (DIN) element with 3-lead configuration, a heavy duty cast iron head and a stainless steel compression fitting with 1/4" NPT.

**1: STYLE CODE**

- R1x: General Purpose probe, 0.250" OD, 316 SS sheath and tip, internal leads are teflon insulated, stranded copper (22 ga for simplex, 24 ga for duplex), 260°C maximum temperature.
- R2x: Tip Sensitive probe, 0.250" OD, 316 SS sheath, copper alloy tip, internal leads are teflon insulated, stranded copper (22 ga simplex, 24 ga for duplex), 260°C maximum temperature
- R3x: Medium Temperature probe, 0.250" OD, 316 SS sheath & tip, internal leads are fiberglass insulated, stranded ni-clad copper (22 ga for simplex, 24 ga for duplex), 500°C maximum temperature.
- R4x: High Temperature probe, 0.250" OD, 316 SS sheath & tip, internal leads are solid nickel, MgO insulated, 600°C maximum temperature. This construction can be supplied in long lengths and coiled.
- R5x: High Vibration probe, 0.250" OD, 316 SS sheath & tip, internal leads are solid nickel, MgO insulated, 500°C maximum temperature.

Other constructions, diameters, materials, etc, are available on special order. Contact factory for details.

**2: ELEMENT CODE**

(a) MATERIAL:                    D: Platinum (IEC) · = 0.003850 Ω/Ω/°C  
     S: Platinum (JIS) · = 0.003916 Ω/Ω/°C

(b) BASE RESISTANCE:    10, 100, 500, 1000 for D  
     100 for S

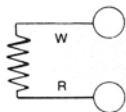

(c) TOLERANCE:                A: ±0.12% of resistance at 0 °C (Standard)  
     E: ±0.06% of resistance at 0 °C (Optional)  
     F: ±0.04% of resistance at 0 °C (Optional)\*  
     H: ±0.012% of resistance at 0 °C (Optional)(range of 0-100 °C only)\*

\* available in 4-wire lead configuration only.

## 2: ELEMENT CODE (cont'd)

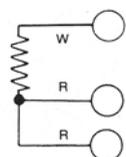

(d) LEADWIRE CONFIGURATION:

### 2-Wire (Code 2)

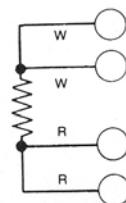

The 2-wire connection provides no lead wire compensation. Reasonable accuracy can only be obtained if leadwire resistance is negligible compared to the ohms/degree change of the RTD.

### 3-Wire (Code 3)

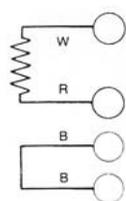

The 3-wire connection allows for leadwire compensation in Wheatstone bridge and constant current circuits. These compensating circuits assume that all leads are of equal resistance. This arrangement is most common for industrial temperature measurements.

### 4-Wire (Code 4)

The 4-wire, type A connection enables complete compensation for the effect of leadwire resistance in potentiometric or compensated bridge measurements. This arrangement is normally used in metrology applications for measurements of the highest precision.

### 4-Wire Type B (Code 5)

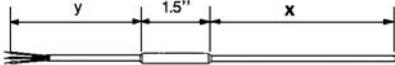

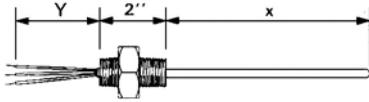

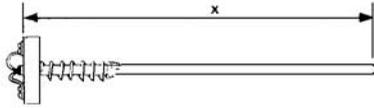

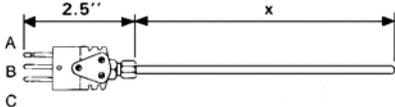

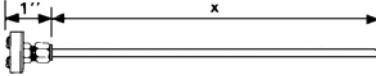

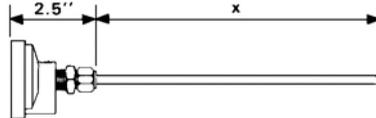

The 4-wire, type B connection is essentially a 2-lead RTD with a compensating loop, and is used in bridge-type differential temperature measurements on equal-ratio bridge networks.

## 3. LENGTH

Specify probe length ("X") in inches (eg: 012.0 = 12")

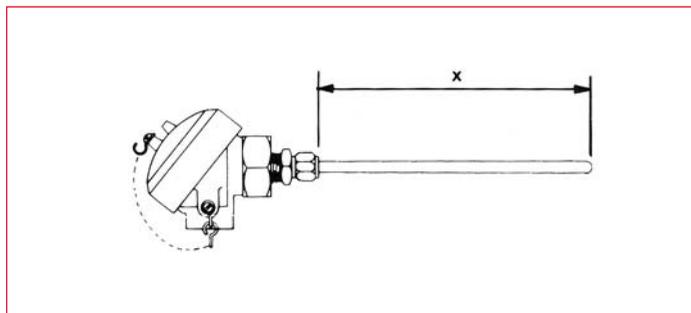

Minimum recommended length: 3"

4: TERMINATION CODE

TERMINATION	CODE	DESCRIPTION
	10	22 ga insulated, stranded copper leads. (Teflon for R1x & R2x; Fiberglass for R3x & R4x.) Specify length Y in inches under "LEADWIRE" 'Construction Type' O (standard length = 6")
	11	Potting adaptor with flexible leadwire. Specify 'Construction Type' and length (Y) under "LEAD WIRE" Use "OPTIONS" to specify fittings, connectors, etc.
	12	Retractable cable, 100°C PVC jacket, 1' coiled, extends to 5.' Specify Y (coiled length) under "LEADWIRE" (Pg 8). Use 'Construction Type' O. (standard length = 1')
	15 16 17 18 19	1/2 x 1/2 MOUNTING ADAPTER 1/2" x 1/2" NPT, S/S      Specify "Y" length (Std = 6") 15 Welded to Probe 16 Spring Loaded 17 Spring Loaded, O-Ring 18 Compression Bolt, Metal Ferrule 19 Compression Bolt, Teflon Seal
	20 21 22 23 24	20 For 14-0008/14-0022 Heads      (X = A + N + 2.25"). 21 For 14-0304/7, 14-0804/7 Heads      (X = A + N + 2.00"). 22 For 14-1080A/1080S/1086S, 14-0018 Heads      (X = A + N + 1.75"). 23 For 14-0007 Head      (X = A + N + 2.25"). 24 For 14-1304/7 Heads      (X = A + N + 2.25").
	25 27	25 3-Pole Plug (200°C) 27 High-Temp 3-Pole plug (425°C)
	30 31	30 Open type, micro terminal block (200°C) 31 High-Temp open type micro terminal block (425°C)
	35 36 37 38	35 Miniature weatherproof plastic terminal head Brass Comp Fitting (200°C) 36 High-Temp miniature W/P plastic terminal head Brass Comp Fitting(425°C) 37 Miniature weatherproof plastic terminal head S/S Comp Fitting (200°C) 38 High-Temp miniature W/P plastic terminal head S/S Comp Fitting(425°C)

### ORDERING INFORMATION

A 6-part catalog number is used to specify a complete RTD assembly:

RA21 - D100A3 - 012.0 - WX3.0 - BH - TW

**Example:** The above catalog number identifies a tip sensitive RTD assembly with a .250" OD stainless steel sheath 12" long, a 100 ohm platinum (DIN) element with 3-lead configuration, a spring-loaded mounting with captive terminal block, a NUN 1/2" galvanized extension, aluminum general purpose head, a TK381 close-coupled transmitter and mounted to a thermowell.

### 1: STYLE CODE

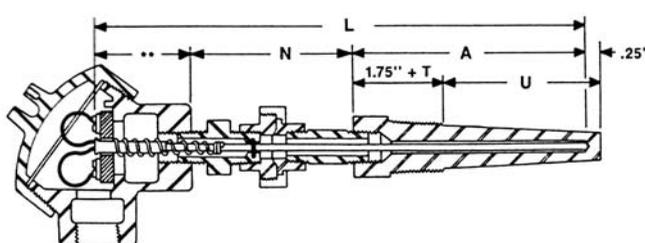

RA1x, 2x, 3x, 4x, 5x, - Refer to page 5

### 2: ELEMENT CODE

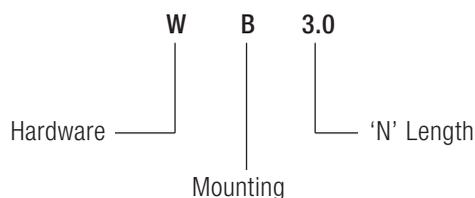

Refer to page 5

### 3: "A" LENGTH

Specify "A" length to 0.1"

### 4: EXTENSION CODE

"N" LENGTH Specify "N" length to 0.1"

#### HARDWARE

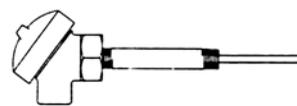

TYPE	MATERIAL/SIZE CODE

**"N" DIMENSION**

The "N" dimension is the overall hardware length between the head and the thermowell.

**"A" DIMENSION**

The "A" dimension is the probe immersion length into the cavity of the thermowell.

**"U" DIMENSION**

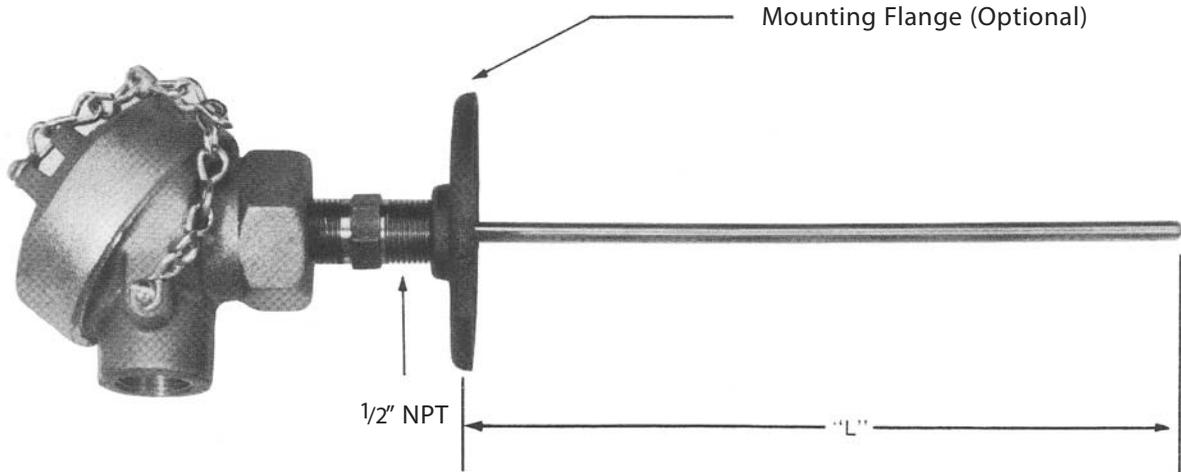

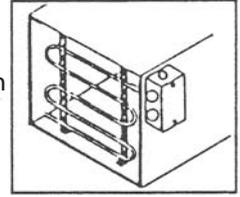

The "U" dimension is the thermowell insertion length below the thread which is exposed to the process.

**"L" LENGTH**

The "L" length is the overall length of the probe. For spring loaded assemblies, an extra .25" is added to ensure contact with the bottom of the thermowell.

**CONTINUOUS AVERAGING RTD**

Application  
Illustration

The continuous averaging RTD probe measures the temperature over its entire length to provide a true average temperature measurement of the cross sectional area of large air ducts or other low temperature air averaging applications. The sensing element is contained within a bendable 3/16" O.D tube and its resistance output conforms to a 100 ohm platinum element with a 0.00385 temperature coefficient. Lengths up to 50 feet in copper and 20 feet in stainless steel can be supplied. Units can be provided with integrally mounted 4-20 mA transmitters. Maximum temperature rating is 100°C

**ORDERING INFORMATION**

Specify: R81 - D100C3 - XXX - 70 - O - F - (0-100°C)

MODEL CODE:

- R81 - Copper tubing, .188" OD
- R82 - Stainless tubing, .250" OD

LENGTH CODE:

Specify length "L" in inches  
Standard lengths are:

CODE	LENGTH
096	96" (8')
144	144" (12')
192	192" (16')
240	240" (20')
288	288" (24')

\*\* Specify range (min span: 30°C, 50°F)  
Element tolerance: 0.5%

**FLEXIBLE 5 & 10-PT AVERAGING RTD**

The point averaging probe is used to measure the average cross-sectional temperature of large air ducts or low temperature ovens and drying kilns. The unit measures at 10 points specified along its length and averages these temperatures for a single output. The sensing elements are inside a 0.27" O.D flexible stainless steel armoured cable. An optional PVC covered cable is available for moisture protection. Resistance output conforms to a 100 ohm platinum element with a 0.00385 temperature coefficient. Units can be provided with integrally mounted 4-20 mA transmitters. Maximum temperature is 200°C (100°C with PVC Jacket)

**ORDERING INFORMATION**

Specify: R84 - D100C3 - XXX - 50 - O - F - A/B/C/D - (0-100°C)

MODEL CODE:

- R84 – 5 pt. averaging, SS Armour, .25OD

**RESISTANCE – TEMPERATURE EQUATIONS**

For industrial measurements, the relationship between resistance and temperature can be approximated by the Callendar–Van Dusen equation:

$$R_t = R_0 \cdot [1 + At + Bt^2 + C(t-100)t^3]$$

$$A = \alpha(1+\delta/100)$$

$$B = -\alpha \times \delta \times 10^{-4}$$

$$C = -\alpha \times \beta \times 10^{-8}$$

(= 0 if t > 0)

Calibration Coefficients	
(100 Ω Pt, DIN/IEC 60751)	
A	3.9083 x 10 <sup>-3</sup>
B	-5.775 x 10 <sup>-7</sup>
C	-4.183 X 10 <sup>-12</sup>
α	0.003850
δ	1.49990
β	0.10863

R<sub>0</sub> = resistance at t = 0°C

R<sub>100</sub> = resistance at t = 100°C

R<sub>h</sub> = resistance at t = t<sub>h</sub> (a high temperature – eg: freezing point of tin or zinc)

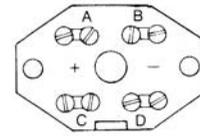

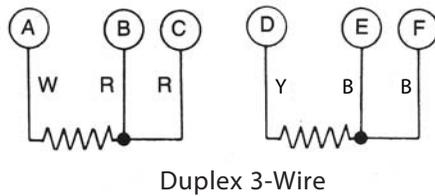

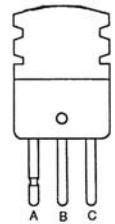

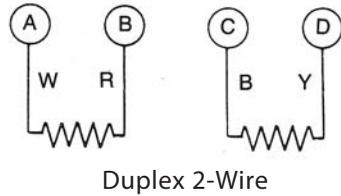

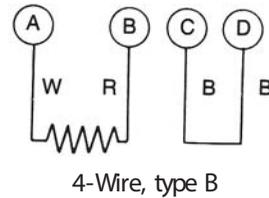

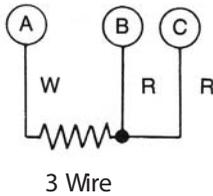

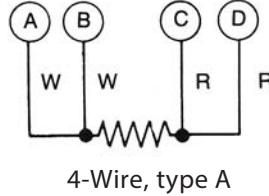

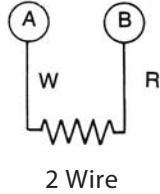

R<sub>l</sub> = resistance at t = t<sub>l</sub> (a low temperature – eg: boiling point of oxygen)

(alpha) α = (R<sub>100</sub>-R<sub>0</sub>) ÷ 100xR<sub>0</sub> (Temperature coefficient of resistance)

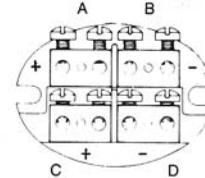

(delta) δ = [t<sub>h</sub>-(R<sub>h</sub>-R<sub>0</sub>)÷(R<sub>0</sub>xα)] ÷ [(t<sub>h</sub>÷100-1)x(t<sub>h</sub>÷100)] (Callendar constant)

(beta) β = [t<sub>l</sub>-{(R<sub>l</sub>-R<sub>0</sub>)÷αxR<sub>0</sub>+δx(t<sub>l</sub>÷100-1)x(t<sub>l</sub>÷100)}] ÷ [(t<sub>l</sub>÷100-1)x(t<sub>l</sub>÷100)<sup>3</sup>] (Van Dusen constant)  
= 0 (if t > 0)
